

Elements of a roadmap for a Green Salon

To make a hair Salon sustainable you can improve on several aspects. The aspects are:

- Environment and energy
- Health and Safety measures
- Products and substrates
- Work methods.

In the Green Salon project you can find tools and materials to help you to grow to a Green Salon.

Among other things:

1. Diagnostic Scan

The diagnostic scan (self assessment) is a tool to make a "picture" of the status of your company, salon or hairdressers department of a VET-institute regarding sustainable aspects like: health and safety and environment. The scan has three levels: basic- intermediate - expert. The scan has questions on the following subjects:

- General Questions (for statistics data)
- Health and Safety: chemicals, use of gloves and ergonomics
- Prevention Management
- Sustainability: consumption and recycling
- Information / knowledge needs

With the help of this self assessment tool you can get an idea of the performance of your hair salon in the areas of health and safety and the environment. You can address the gaps in your organization on these topics so that you can achieve a safer, healthier or more environmentally friendly working environment.

2. Learning Material

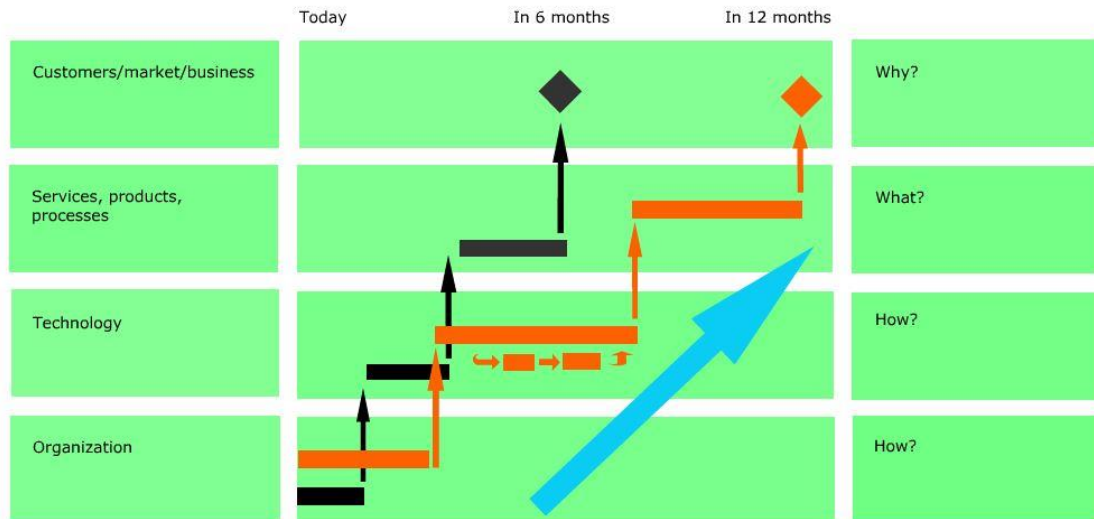

In the learning material you can find a lot of information and knowledge you can use to improve processes in your salon. This information and knowledge can be used in different ways. Namely to increase the knowledge level of the employees, risk analyses, analyses of the used products and substrates on allergy and chemicals, analyses on equipment like ventilation and tools, to change methods of working so that work can be done in a safer or more environmentally friendly way, as support in making new policy or supporting investment decisions. A better way of working creates reduce of risks, creates possibilities of prevention.

Module 1 Environment and energy

Recycle waste, recycle electric items, reducing consumption (energy, products, paper etc.), eco-furniture, legislation.

Module 2 Health and Safety

Dermatitis, asthma and respiratory, ergonomics, microclimate, health and wellbeing, nails.

Example of a roadmap

3. Guidelines to make a roadmap

One of the problems for an entrepreneur in the Hair and Beauty sector is to implement new services, new processes or make changes in the organization. Creating a roadmap is a solution to support these changes in the own company.

In the Green Salon project is to develop a method to make such a roadmap in a simple way. See output 5 to download an easy step to step method on developing your own roadmap.
