NATIONAL ALLERGY RESEARCH CENTRE

- ▶ Co-operating with the colleges
- ▶ Developing teaching materials
- ▶ Communications via e-mail on a regular basis on news and results
- ▶ Observing the students

Danish Technological Institute, *By Falengreen* and *Aarhus Tech*, worked on the development of a new hair dye technology.

► Purpose

The objective of the project was to develop allergy-friendly alternatives to existing hair dyes that are completely or partially free of health and environmentally hazardous substances.

Dyeing human hair is possible with the new *in situ* dye technology, but the result is a less intense and less deep colour than desired and differences are observed with respect to the durability of the colour, depending on the dyes used.
